Balanced & Nutritious
Cattle Feed, Antibiotics Free

India is the largest milk producer in the world. This is all due to the animal population here. But animal productivity is very low towards us, the main reason is not the availability of balanced diet. In Indian milk production, 70% of milk is supplied from landless farmers. The share of milk products is about 5 percent of the country's GDP.

Good quality feed to animals is necessary to increase milk production rapidly. It is well known that about 60 to 70 percent of the expenditure on milch animals is only on their diet. In such a situation, it is necessary that the dosage of animals should be appropriate and balanced according to their production, in which all the essential elements are present. Often the following ingredients are found in common food method, animals mainly need 6 nutritious balanced amounts.

6 NUTRITIOUS BALANCED AMOUNTS

1. Protein
2. Mineral Salts
3. Vitamin
4. Fat
5. Carbohydrate
6. Water

Often, cattle rearers feed only their milch animals like bran, cake, green fodder and dry fodder and do not understand the usefulness of scientifically prepared feeds nor use balanced diet, so that the animal foster does not get as much production as it should. Therefore, it is very important that the herders pay special attention to them and use only balanced diet. Which includes the above elements. Animal and animal foster can benefit from a balanced animal diet. As much as animal food is necessary, clean water is equally important, so water should be fed from time to time.

MILK

- Chilled mineral as well as other essential mineral salts
- Containing a variety of vitamins
- Rich in herbs
- Scientific Balanced Animal Feed
- Completely vegetarian.

SREEMA FEED'S

M 4000

SUPER PREMIUM BALANCE & NUTRITIOUS CATTLE FEED
(for animals with more than 10-12 liters of Milk)

CHARACTERISTICS :

- ✳ Made from the elements that feed the animals in the local area.
- ✳ Consistent with the milking ability of animals found in the local area.
